I saw Clerkie is hiring Full-Stack Engineers and, as someone passionate about using technology to improve financial wellness, I was immediately interested. Your mission really resonates with me.

• At AR Systems, I designed and deployed microservices on OCI Cloud, achieving 99.9% uptime with automated CI/CD pipelines, which speaks directly to building reliable systems.

• I modernized UIs using React.js, creating responsive components that improved usability, and Clerkie mentions React and Next.js in the job description.

• I've also developed RESTful APIs using ASP.Net/C# and GraphQL, enhancing backend–frontend data exchange by 20%, which aligns with building efficient APIs.

I'm eager to learn more about how my skills and experience can contribute to Clerkie's goals. I'm available for a conversation at your earliest convenience.
